PRODUCT MANAGER -- PARCELWORKS SOFTWARE (1.5 years)

Built internal tooling for a last-mile delivery software vendor. Worked alongside warehouse operations staff during peak season but did not personally run freight-forwarding or customs operations. Shipped a route-planning feature used by the 6-person ops team after pairing with two dispatchers to understand daily routing pain points.

Reported into a Director of Product who approved the route-planning roadmap each quarter.

Tracked on-time delivery rate as a shipped-feature metric but did not kill or pivot any feature based on that data during the role.

PRODUCT ANALYST -- PARCELWORKS SOFTWARE (prior, 6 months)

Compiled delivery-time reports for the operations team before moving into the PM role above.

Did not own a feature area or make roadmap calls in this earlier role; work was assigned by a senior product manager and reviewed before being shared with stakeholders.
