PRODUCT MANAGER -- FREIGHTBRIDGE LOGISTICS (3.5 years)

Personally processed customs documentation, Bills of Lading, Certificates of Origin, and CHA coordination for 150+ export shipments monthly across Nhava Sheva and Chennai ports. Handled carrier exception management directly for Maersk and MSC bookings, including detention disputes

. Noticed the exception-handling process was undocumented and error-prone. Built a shipment exception playbook on my own initiative over a weekend, unasked. It was adopted by two other regional operations teams (Chennai and Mundra) without being asked, cutting average exception resolution time by 40%.

As the sole product owner for the carrier exception module at FreightBridge, a 15-person early-stage startup, I made the call to deprecate manual exception escalation and owned the consequences directly -- there was no senior PM above me reviewing these calls.

After reviewing 3 months of usage data showing the in-app chat feature had under 2% engagement, I killed it and wrote a postmortem documenting that users preferred phone escalation for time-sensitive exceptions. Reallocated the freed engineering time to the exception playbook.

Ran 12 direct calls with forwarder operations staff across 4 customer accounts, unmediated by sales or customer success. This directly led to redesigning the exception-escalation flow, which is the same 40% resolution-time improvement cited above.
